*See matrix for available extensions.

Features

- Dual Marked with Device Part Number and DESC Drawing Number
- Manufactured and Tested on a MIL-PRF-38534 Certified Line
- QML-38534, Class H and K
- Four Hermetically Sealed Package Configurations
- Performance Guaranteed over -55°C to $+125^{\circ}\text{C}$
- Wide V_{CC} Range (4.5 to 20 V)
- 350 ns Maximum Propagation Delay
- CMR: $> 10,000 \text{ V}/\mu\text{s}$ Typical
- 1500 Vdc Withstand Test Voltage
- Three State Output Available
- High Radiation Immunity
- HCPL-2200/31 Function Compatibility
- Reliability Data
- Compatible with LSTTL, TTL, and CMOS Logic

Applications

- Military and Space
- High Reliability Systems
- Transportation and Life Critical Systems
- High Speed Line Receiver

- Isolated Bus Driver (Single Channel)
- Pulse Transformer Replacement
- Ground Loop Elimination
- Harsh Industrial Environments
- Computer-Peripheral Interfaces

Description

These units are single, dual and quad channel, hermetically sealed optocouplers. The products are capable of operation and storage over the full military temperature range and can be purchased as either standard product or with full MIL-PRF-38534 Class Level H or K testing or from the appropriate DESC Drawing. All devices are manufactured and tested on a MIL-PRF-38534 certified line and are included in the DESC Qualified Manufacturers List QML-38534 for Hybrid Microcircuits.

Each channel contains an AlGaAs light emitting diode which is optically coupled to an integrated high gain photon detector. The detector has a threshold with hysteresis which provides differential mode noise immunity and

eliminates the potential for output signal chatter. The detector in the single channel units has a tri-state output stage

Truth Tables

(Positive Logic)

Multichannel Devices

| Input | Output |
|---------|--------|
| On (H) | H |
| Off (L) | L |

Single Channel DIP

| Input | Enable | Output |
|---------|--------|--------|
| On (H) | H | Z |
| Off (L) | H | Z |
| On (H) | L | H |
| Off (L) | L | L |

Functional Diagram

Multiple Channel Devices Available

CAUTION: It is advised that normal static precautions be taken in handling and assembly of this component to prevent damage and/or degradation which may be induced by ESD.

which allows for direct connection to data buses. The output is non-inverting. The detector IC has an internal shield that provides a guaranteed common mode transient immunity of up to 10,000 V/ μ s. Improved power supply rejection eliminates the need for special power supply bypass precautions.

Package styles for these parts are 8 pin DIP through hole (case outline P), 16 pin DIP flat pack (case outline F), and leadless

ceramic chip carrier (case outline 2). Devices may be purchased with a variety of lead bend and plating options, see Selection Guide Table for details. Standard Military drawing (SMD) parts are available for each package and lead style.

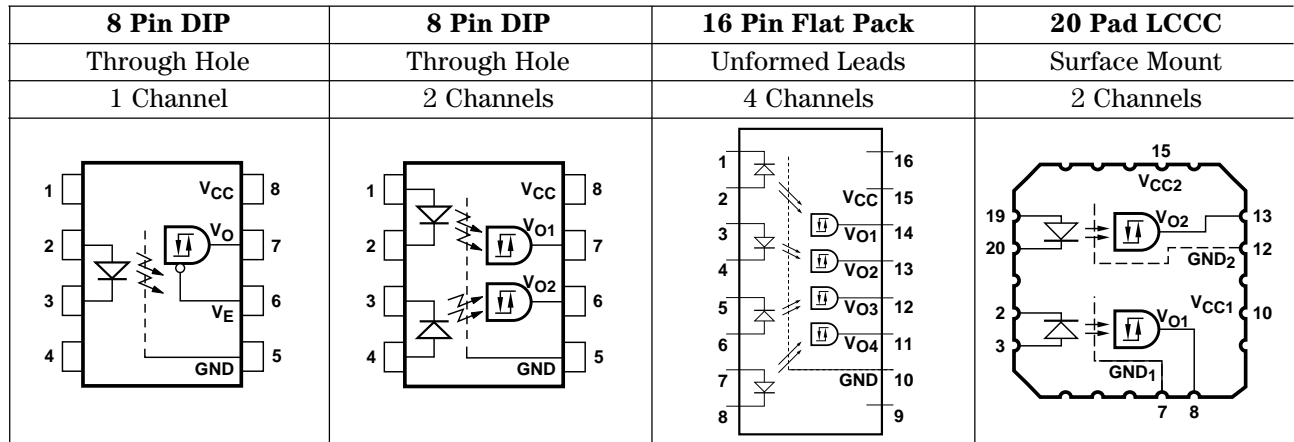

Because the same electrical die (emitters and detectors) are used for each channel of each device listed in this data sheet, absolute maximum ratings, recommended operating conditions, electrical

specifications, and performance characteristics shown in the figures are identical for all parts. Occasional exceptions exist due to package variations and limitations and are as noted. Additionally, the same package assembly processes and materials are used in all devices. These similarities give justification for the use of data obtained from one part to represent other part's performance for die related reliability and certain limited radiation test results.

Selection Guide—Package Styles and Lead Configuration Options

| Package | 8 Pin DIP | 8 Pin DIP | 16 Pin Flat Pack | 20 Pad LCCC |
|--------------------------------|--------------|-----------------------|-----------------------|---------------|

Hermetic Optocoupler Options

| Option | Description |
|--------|--|
| 100 | <p>Surface mountable hermetic optocoupler with leads trimmed for butt joint assembly. This option is available on commercial and hi-rel product in 8 pin DIP (see drawings below for details).</p> |
| 200 | <p>Lead finish is solder dipped rather than gold plated. This option is available on commercial and hi-rel product in 8 pin DIP. DESC Drawing part numbers contain provisions for lead finish. All leadless chip carrier devices are delivered with solder dipped terminals as a standard feature.</p> |
| 300 | <p>Surface mountable hermetic optocoupler with leads cut and bent for gull wing assembly. This option is available on commercial and hi-rel product in 8 pin DIP (see drawings below for details). This option has solder dipped leads.</p> |

Absolute Maximum Ratings

Storage Temperature Range, T_S -65°C to +150°C
Operating Temperature, T_A -55°C to +125°C
Case Temperature, T_C +170°C
Junction Temperature, T_J +175°C
Lead Solder Temperature 260°C for 10 s
Average Forward Curre, $I_{F\text{ AVG}}$ (each channel) 8 mA
Peak Input Current, $I_{F\text{ PK}}$ (each channel) 20 mA^[1]
Reverse Input Voltage, V_R (each channel) 3 V
Supply Voltage, V_{CC} 0.0 V min., 20 V max.
Average Output Current, I_O (each channel) 15 mA
Output Voltage, V_O (each channel) -0.3 V min., 20 V max.
Package Power Dissipation, P_d (each channel) 200 mW

Single Channel Product Only

Tri-State Enable Voltage, V_E -0.3 V min., 20 V max.

8 Pin Ceramic DIP Single Channel Schematic

Note enable pin 6. An external 0.01 μ F to 0.1 μ F bypass capacitor is recommended between V_{CC} and ground for each package type.

ESD Classification

(MIL-STD-883, Method 3015)
HCPL-5200/01, HCPL-6230/31 (Δ), Class 1
HCPL-5230/31, HCPL-6250/51 (Dot), Class 3

Recommended Operating Conditions

| Parameter | Symbol | Min. | Max. | Units |
|---|----------|------|------|-------|
| Power Supply Voltage | V_{CC} | 4.5 | 20 | V |
| Input Current, High Level, Each Channel | I_{FH} | 2 | 8 | mA |
| Input Voltage, Low Level, Each Channel | V_{FL} | 0 | 0.8 | V |
| Fan Out (TTL Load) Each Channel | N | | 4 | |

Single Channel Product Only

| | | | | |
|---------------------------|----------|-----|-----|---|
| High Level Enable Voltage | V_{EH} | 2.0 | 20 | V |
| Low Level Enable Voltage | V_{EL} | 0 | 0.8 | V |

Electrical Characteristics

| Output Fall Time (90-10%) | t_f | 10 | ns | | 5, 7 | 2 |

Typical Characteristics (cont'd.)

All typical values are at $T_A = 25^\circ\text{C}$, $V_{CC} = 5\text{ V}$, $I_{F(\text{ON})} = 5\text{ mA}$, unless otherwise specified.

Single Channel Product Only

| Parameter | Symbol | Typ. | Units | Test Conditions | Fig. | Notes |
|-------------------------------------|-----------|------|-------|-----------------|------|-------|
| Output Enable Time to Logic High | t_{PZH} | 30 | ns | | 8 | |
| Output Enable Time to Logic Low | t_{PZL} | 30 | ns | | 8 | |
| Output Disable Time from Logic High | t_{PHZ} | 45 | ns | | 8 | |
| Output Disable Time from Logic Low | t_{PLZ} | 55 | ns | | 8 | |

Dual and Quad Channel Products Only

| | | | | | | |
|--|-----------|-----------|----------|---|--|---|
| Input-Input Insulation Leakage Current | I_{I-I} | 0.5 | nA | $RH = 45\%$, $T_A = 25^\circ\text{C}$, $V_{I-I} = 500\text{ V}$, $t = 5\text{ s}$ | | 9 |
| Resistance (Input-Input) | R_{I-I} | 10^{13} | Ω | $V_{I-I} = 500\text{ V}$ | | 9 |
| Capacitance (Input-Input) | C_{I-I} | 1.5 | pF | $f = 1\text{ MHz}$ | | 9 |

Notes:

1. Peak Forward Input Current pulse width $< 50\text{ }\mu\text{s}$ at 1 KHz maximum repetition rate.
2. Each channel of a multichannel device.
3. Duration of output short circuit time not to exceed 10 ms.
4. All devices are considered two-terminal devices: measured between all input leads or terminals shorted together and all output leads or terminals shorted together.
5. This is a momentary withstand test, not an operating condition.
6. CM_L is the maximum rate of rise of the common mode voltage that can be sustained with the output voltage in the logic low state ($V_O < 0.8\text{ V}$). CM_H is the maximum rate of fall of the common mode voltage that can be sustained with the output voltage in the logic high state ($V_O > 2.0\text{ V}$).
7. t_{PHL} propagation delay is measured from the 50% point on the leading edge of the input pulse to the 1.3 V point on the leading edge of the output pulse. The t_{PLH} propagation delay is measured from the 50% point on the trailing edge of the input pulse to the 1.3 V point on the trailing edge of the output pulse.
8. Measured between each input pair shorted together and all output connections for that channel shorted together.
9. Measured between adjacent input pairs shorted together for each multichannel device.
10. Zero-bias capacitance measured between the LED anode and cathode.
11. Standard parts receive 100% testing at 25°C (Subgroups 1 and 9). SMD and hi-rel parts receive 100% testing at 25, 125, and -55°C (Subgroups 1 and 9, 2 and 10, 3 and 11, respectively).
12. Parameters are tested as part of device initial characterization and after design and process changes. Parameters guaranteed to limits specified for all lots not specifically tested.

MIL-PRF-38534 Class H, Class K, and DESC SMD Test Program

Hewlett-Packard's Hi-Rel Opto-couplers are in compliance with MIL-PRF-38534 Classes H and K. Class H devices are also in compliance with DESC drawings 5962-88768, and 5962-88769.

Testing consists of 100% screening and quality conformance inspection to MIL-PRF-38534.
