

DM74LS469 8-Bit Up/Down Counter

General Description

The 'LS469 is an 8-bit synchronous up/down counter with parallel load and hold capability. Three function-select inputs (LD, UD, CBI) provide one of four operations which occur synchronously on the rising edge of the clock (CK).

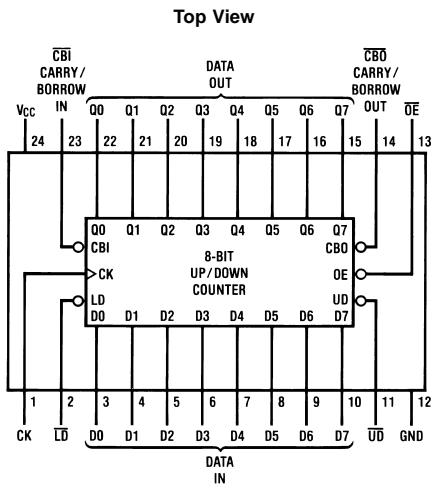

The LOAD operation loads the inputs (D₇–D₀) into the output register (Q₇–Q₀). The HOLD operation holds the previous value regardless of clock transitions. The INCREMENT operation adds one to the output register when the carry-in input is TRUE (CBI = LOW), otherwise the operation is a HOLD. The carry-out (CBO) is TRUE (CBO = LOW) when the output register (Q₇–Q₀) is all HIGHS, otherwise FALSE (CBO = HIGH). The DECREMENT operation subtracts one from the output register when the borrow-in input is TRUE (CBI = LOW), otherwise the operation is a HOLD. The borrow-out (CBO) is TRUE (CBO = LOW) when the output register (Q₇–Q₀) is all LOWs, otherwise FALSE (CBO = HIGH).

The output register (Q₇–Q₀) is enabled when \overline{OE} is LOW, and disabled (HI-Z) when \overline{OE} is HIGH. The output drivers will sink the 24 mA required for many bus-interface standards. Two or more 'LS469 octal up/down counters may be cascaded to provide larger counters.

Features/Benefits

- 8-bit up/down counter for microprogram-counter, DMA controller and general-purpose counting applications
- 8 bits matches byte boundaries
- Bus-structured pinout
- 24-pin SKINNYDIP saves space
- 3-STATE outputs drive bus lines
- Low current PNP inputs reduce loading
- Expandable in 8-bit increments

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
