

## OCTAL BUS TRANSCEIVER

### DESCRIPTION

The T54LS245/T74LS245 is an Octal Bus Transceiver intended for 8-line asynchronous 2-way data communication between data buses. Direction Input (DR) takes over the transmission of Data from bus A to bus B or bus B to bus A depending on its logic level. Enable input is usable for isolation of the buses.

- 2-WAY ASYNCHRONOUS DATA BUS COMMUNICATION
- HYSTERESIS INPUTS TO IMPROVE NOISE IMMUNITY
- INPUT DIODES LIMIT HIGH-SPEED TERMINATION EFFECTS

### TRUTH TABLE

INPUTS		OUTPUT
$\bar{E}$	DR	
L	L	Bus B Data to Bus A
L	H	Bus A Data to Bus B
H	X	Isolation

H = HIGH Voltage Level

L = LOW Voltage Level

X = Don't Care

## ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
$V_{CC}$	Supply Voltage	-0.5 to 7	V
$V_I$	Input Voltage, Applied to Input	-0.5 to 15	V
$V_O$	Output Voltage, Applied to Output	0 to 10	V
$I_I$	Input Current, Into Inputs	-30 to 5	mA
$I_O$	Output Current, Into Outputs	50	mA

Stresses in excess of those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions in excess of those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## GUARANTEED OPERATING RANGES

Part Numbers	Supply Voltage			Temperature
	Min	Typ	Max	
T54LS245D2	4.5 V	5.0 V	5.5 V	-55°C to +125°C
T74LS245XX	4.75 V	5.0 V	5.25 V	0°C to +70°C

XX = package type.

One possible solution to the important problem of PWB minimization, is that of using surface mounted components. Integrated circuits in SO (Small Outline) packages are made up of standard chips mounted in very small plastic packages. The advantages given by using these devices are:

### **PWB Reduction**

This is by far the most important advantage since the reduction of PWB size varies from 40 to 60% in comparison with standard board types. (See page 584 for package dimensions.)

### **Assembly Cost Reduction**

SO Devices require no preliminary operation prior to mounting and can therefore be easily utilized in fully automatic equipment.

### **Increasing Reliability**

The following characteristics lead to a higher level of reliability with respect to their standard packaged counter parts:

- The mounting system is fully automatic
- PWB number and the interconnections between them are reduced when the same number of devices are used.
- The high density of components on the board makes it thermally much more stable.

### **Noise Reduction and Improved Frequency Response**

The reduction of the length of the connecting wires between the leads and the silicon guarantees a more homogeneous propagation delay between the external pins, with respect to the standard type.

### **Assembly Without Board Holes**

The devices are placed on the board and soldered. This technology permits a higher level of tolerance in the positioning (automatic) of the device. For the standard DIP types this must be done with great accuracy due to the insertion of the leads into their holes.
