- Fast Switching Speed: 4 nS Typical
- Ultra Low DC Power Consumption
- Small Package Size: 0.250" Square

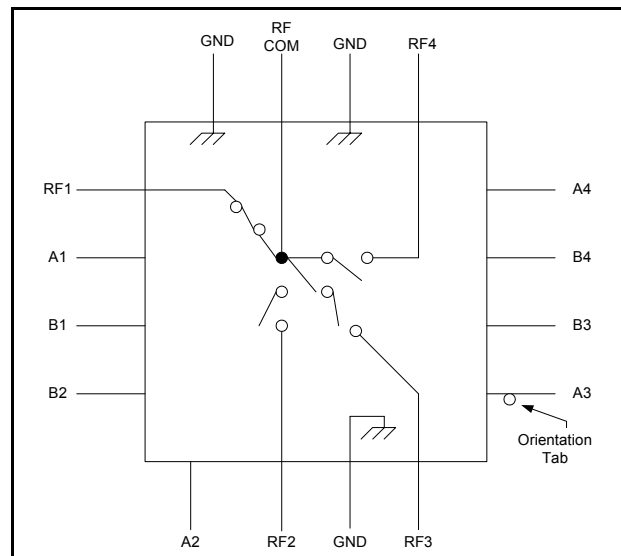

Description

M/A-COM's SW-243 GaAs MMIC SP4T switch is packaged in a CR-4 surface mount ceramic style package. The SW-243 is a reflective switch, optimized for low insertion loss. The CR-4 package is hermetically sealed, making these switches ideal for space, military radios, or other environmentally harsh applications.

Typical applications include synthesizer switching, switch matrices and filter banks in systems such as military radios, and space equipment.

The SW-243 is fabricated as a monolithic GaAs MMIC using a 1.0 micron MESFET process.

5. Faster switching speed can be achieved with enhanced driver waveform.

Handling Procedures

Please observe the following precautions to avoid damage:

Static Sensitivity

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

Truth Table ^{6,7}

Control Input								Condition of Switch, RF Common to each RF Port			
A1	B1	A2	B2	A3	B3	A4	B4	RF1	RF2	RF3	RF4
1	0	0	1	0	1	0	1	On	Off	Off	Off
0	1	1	0	0	1	0	1	Off	On	Off	Off
0	1	0	1	1	0	0	1	Off	Off	On	Off
0	1	0	1	0	1	1	0	Off	Off	Off	On

6. 0 = 0 V to -0.2 V, 1 = -5 V to -8 V

7. When an RF output port is "off" it is shorted to ground through an "on" shunt MESFET.
